

Cicada GC and logical version lifetime

Time-bucket quantiles: repetition mean with min-max range (no t interval); logical versions: mean with 95% t confidence interval. Color denotes long tx; p50 solid, p90 dashed. Instrumented build; throughput is not a performance result. YCSB 10 ops, payload 4 B; read ratio/skew [(50, 0), (95, 0.9)]; long tx ['none', 'ops1000', 'wait10ms', 'wait1ms']; gc_inter_us [10, 1000, 100000]; N=1,000,000; 3 s, 3 repetitions; timestamp space includes clock boost; read position starts at latest, validation position at scan start
