

(a) Throughput and stock-relative throughput

48 threads · N=1M · Zipf 0.9 · 10 ops · 3 s; external GC 10/100 μs; unlink without reuse

Normal arms passed; preregistered S8 positive unmet (positive 0, auxiliary detections 6, disqualified 0). Performance: unverified diagnostic data (indeterminate ceiling).

stock minimum general

Performance: 3 rotated reps per arm and cell; point = median TPS, whisker = rep min-max. Ratio = median variant / median stock; ratio whiskers = paired rep range. Stock is the dashed 1× line. * ronly: pruning 0; differences show install-path cost only. rr50 / rr95 are separate rows; wait10x2 has two long threads. Missing perf cells: none. Verification: Normal arms passed; preregistered S8 positive unmet (positive 0, auxiliary detections 6, disqualified 0).
